

PROJECT LINKING ACTIONS OF UNMET NEEDS IN CHILDRENS HEALTH – PROJECT LAUNCH

Partner on proposal writing, implementation, and evaluation

The Brazelton Touchpoints Center (BTC) Research and Evaluation team seeks opportunities to partner as site specific evaluators for Project Linking Actions of Unmet Needs in Children’s Health (Project LAUNCH) grants. With over 13 years of experience working with Project LAUNCH tribal grantees, the Research and Evaluation team can help you create more coordinated and collaborative early childhood systems that raise the quality and availability of prevention and wellness services for young children and families.

Using a community-participatory approach, BTC Research and Evaluation can partner with Project LAUNCH tribal grantees to:

- support tribal nation building
- integrate cultural practices and traditions into evidence-based practices
- co-construct needs assessments, strategic plans, evaluation design, and implementation plans
- build capacity for needs assessments, information gathering, management, and community reporting
- promote quality improvement through evaluation measures selection, data collection, analysis, and translation of evaluation into practice
- apply indigenous practices and methods into required evaluation for Federal and State grant reporting
- develop and support sustainability of interventions and activities...and more!

BTC evaluators support the selection, implementation, and evaluation of activities that include:

- **systems improvement and capacity building**
- **developmental screenings and assessments**
- **early childhood mental health and mental health consultation**
- **family strengthening and parenting skills training**
- **integration of behavioral health into primary care settings**
- **home visiting with a focus on social and emotional well-being**

About Us

BTC’s Research and Evaluation team combines mixed methods and strong community participatory approaches to advance knowledge about implementation and effectiveness of interventions important to the lives of young children and families. Team members bring expertise in longitudinal statistical analysis, level-three translational research, and qualitative design, synthesis, and analysis to all projects, as well as access to an extensive system of statistical packages and qualitative data systems.

Based at Boston Children’s Hospital, BTC offers evidence based professional development, research, evaluation, and technical assistance that build the developmental and relational practice skills of professionals and leaders across family-facing fields, including early childhood education, pediatrics, home visiting, and mental health.
