

Facilitating Tribal MIECHV Implementation and Evaluation

The Brazelton Touchpoints Center's (BTC) Research and Evaluation team seeks opportunities to partner as the site specific evaluators for Tribal Maternal Infant Early Childhood Home Visiting (TMIECHV) grants, leveraging its considerable experience in working with home visiting programs, a number of home visiting models, and tribal communities. Using a community participatory approach, BTC has partnered with tribal communities to implement and evaluate tribal home visiting work.

BTC Research and Evaluation has collaborated with tribal nations to:

- support tribal nation building
- integrate cultural practices and traditions into evidence-based home visiting practices
- co-construct needs assessments, strategic plans, evaluation design, and implementation plans
- build capacity for needs assessments, information gathering, management, and community reporting
- promote quality improvement and home visiting outcomes through evaluation measures selection, data collection, analysis, and translation of evaluation into practice
- apply indigenous practices and methods into required evaluation for Federal and State grant reporting
- develop and support sustainability of home visiting activities...and more!

BTC evaluators support the selection, implementation, and evaluation of home visiting activities that include:

- **Systems improvement and integration**
- **Screenings and assessments through home visiting**
- **Home Visiting model implementation and evaluation with attention to adaptation for the community**
- **Culture and traditional practices embedded in home visiting program and practice**

About Us

BTC's Research and Evaluation team combines mixed methods and strong community participatory approaches to advance knowledge about implementation and effectiveness of interventions important to the lives of young children and families. Team members bring expertise in longitudinal statistical analysis, level-three translational research, and qualitative design, synthesis, and analysis to all projects, as well as access to an extensive system of statistical packages and qualitative data systems.

Based at Boston Children's Hospital, BTC offers evidence-based professional development, research, evaluation, and technical assistance that build the developmental and relational practice skills of professionals and leaders across family-facing fields, including early childhood education, pediatrics, home visiting, and mental health.
